TECHNICAL SKILLS

Languages: JavaScript, C#, Python, HTML5, JSX, CSS3, SQL, Java Ruby

Frameworks: React, Redux, AngularJS, ASP.NET, Tailwind, Sass, Bootstrap, Ruby on Rails, Node.js, Next.js

Developer Tools: Git, Visual Studio, ServiceNow, MongoDB, SQL, Mongoose, REST API

EXPERIENCE

GnarlyWood

2023 – 2024

Software Engineer

Vista, CA

- Developed and maintained features for GnarlyWood's music distribution platform using C# within the ASP.NET MVC framework, improving the flow of order data and enhancing user experience.
- Generated financial reports for major record labels using ASP.NET, contributing to dynamic data analysis and integration.
- Accelerated data integration processes using Python Selenium WebScripts, streamlining workflows for artists and inventory adjustments.
- Made asynchronous calls to the backend using JavaScript to fetch and dynamically display data, improving responsiveness and user-friendliness of the website.

NewRocket

2021 – 2022

Software Engineer

Vista, CA

- Led development efforts for a ServiceNow portal, introducing 2 impactful features that increased customer engagement by 50%.
- Collaborated with the design team to translate Figma designs into the implementation of 6 distinct employee portals ahead of the Go-Live date.
- Developed and customized widgets in ServiceNow portals with JavaScript to improve user interface functionality and overall user experience.

Kalloc Studios

2019 – 2020

QA Tester

Vista, CA

- Manually tested architectural design/simulation software, identifying and logging bugs in C++ code using Jira.
- Deployed new build versions of the product using Visual Studio as part of a fast-paced Scrum cycle startup environment.
- Collaborated with the development team to implement new features based on customer feedback and QA suggestions.

EDUCATION

California State University San Marcos

San Marcos, CA

Bachelor of Science in Computer Science

June 2017

App Academy

San Francisco, CA

Full-Stack Coding Bootcamp

2020

PROJECTS

TBDeveloped | *ReactJS, Redux, MongoDB, Node.js, WebRTC*

2021

Developed a full-stack open-source platform to connect innovators and developers, built using the MERN stack.

- Built real-time video communication features using Socket.io and WebRTC, enabling seamless interactions between users.
- Developed back-end authentication routes with Mongoose, enhancing security and streamlining the user registration process.
- Implemented RESTful API calls for managing reviews and posts, ensuring efficient data flow between the client and server.

CERTIFICATIONS

ServiceNow Certified System Administrator

Expected October 2024

ServiceNow Certified Application Developer

Expected November 2024
